

Strategic Information Planning: Alignment of IT Planning with Business Planning with the Application of Analytic Network and Analytic Hierarchy Process Maturity model

PVL Narayana Rao¹, Prof (Dr.) G. V. Ramaraju²

¹Research Scholar, PhD in Computer Science and Engineering, Lingaya's University, Faridabad, India.

²Research Supervisor, Pro Vice Chancellor (R & D), Lingayas University, Faridabad, India.

Abstract--The lives of the individuals has influenced by the data innovation in their day-today lives, on account of its movement. The innovation has changed incomprehensibly, when time passes thus have the odds. For enhancing the adequacy and proficiency of the overall people in the business movements, when we utilized data innovation and the business all in all. The interest of expansion in Information Technology (IT)/Information Systems (IS) has made the top administration of the more intricate and troublesome. It is critical to have a suitable arrangement keeping in mind the end goal to deal with the IS/IT based frameworks. IT/IS characterizes the frameworks and give intends to deal with the frameworks. Vital data frameworks arranging SISP (Strategic Information System Planning) is a genuine method for rising and maintaining the IS/IT frameworks that backing the business operations.

The key part of SISP in the changing business situation inspected by the exploration. Fundamental things for enhanced business execution are the arrangement of the IS/IT arranges and the marketable strategies. We can discover key parts of the study in India by Maturity Model Using ANP/AHP. The Data sets incorporated the poll to the IT and business directors of the organization. The Conclusion tells that there is no formal arranging process in the organization.

Keywords--ERP (Enterprise Resource Planning), SCM (Supply Chaining Management), CRM (Customer Relation Management), ANP (Analytic Network Process), AHP (Analytic Hierarchy Process).

I. INTRODUCTION

A. Background

K.C.P Sugar and Industries Company Ltd is unique amongst the main sugar fabricating organizations in India . Its unified business comprises of assembling and showcasing of Rectified Spirit, Extra Neutral Alcohol, Ethanol, Incidental Cogeneration of Control, Organic Dung, Mycorrhiza Vam, Calcium Lactate and CO₂. Organization has two sugar production lines located in Krishna District Andhra Pradesh needing a total squashing limit of 11,500 tons for each day.

KCP Sugar has contributed time and vitality to Implement IT into the framework to convey life into the productivity, employees and to empower great and brief support of the clients and sellers.

B. Statement of the Problem

Accordingly the following problems were brought on all through the Lakshmpuram KCP Sugars Ltd., extend and are presently surrendering its ERP SAP programming execution. In view of the accompanying ones.

C. Motivation of the Research

On seeing ERP implementation failure because of many reasons mentioned in the statement of the problem, I motivated to give solution for this problem for KCP Sugars Ltd. By introduction of new system Strategic Information System Planning with the help of Application of Analytic Network and Analytic Hierarchy Process Maturity model.

D. Research Aim and Scope

Research Aim is to find solution for the research problem find out in KCP Sugars Ltd with the Application of Analytic Network and Analytic Hierarchy Process Maturity model to the new methodologies :

II. LITERATURE REVIEW

A. A Review Of Sisp Literature

Introduction

Goes for a decent writing audit are recognized as 'to exhibit a commonality with an assemblage of information and build up validity; to demonstrate the way of former examination and how a present venture is connected to it; to coordinate and outline what is known in a zone; to gain from others and fortify new thoughts' .

B. SISP Success and Benefits

The success of SISP is observable in the light of organization's success. An organization's success is expressed differently depending on varying strategic directions.

For some it can be achieving target levels of profit, low-cost competition, seamless supplier and customer relationships, etc. (Porter, 1987 as cited by Teo et al., 1997).

C. Information Feedback

A framework likewise joins criticism (Forrester, 1969 as referred to by Sterman, 2000). The framework criticism circles can be certain (speak to development, 'strengthening', non selfbalancing nature), negative (objective looking for, automatic, adjusting), or negative input circles with time delays (motions –damped, limit cycles or disorder).

D. IS Subsystems

Data frameworks are occasions of coordination of complex connections among an extensive number of builds. The key issue is to recognize straight and non-direct connections just between important develops, decreasing the unpredictability to a satisfactory level (Forrester as referred to by Richardson and Pugh, 1981, Saaty, 2001b).

The traditional perspective of a procedure as 'an arrangement of exercises' is a point of view that has been utilized as a part of the writing to portray SISP arranging forms. The SISP arranging exercises are portrayed as (Flynn and Goleniewska, 1993):

E. Approaches to SISP Success

As there is no SISP industry standard, the SISP writing reports the plenty of ways to deal with SISP, large portions of which rotate around Earl's (1993) hypothesis. Breaking down information from various associations, Earl (1993) found that the hierarchical methodology is better than every single other methodology and it is the best approach with the most elevated rating for the three constituting components of a methodology: strategy, procedure and usage.

III. EARLIER SYSTEM

A. Description of the Earlier System

Practice to be preserved from the current system

Presentation:

Safeties and Argument Board of India (SEBI) has counseled SEBI (Prohibition of Insider Trading) Regulations, 2015, vide warning No. Chap/NRO/GN/2014-15/21/85 dt. 15.01.2015, which came into power on 14.05.2015.

A. Doing it in any case.

Regularly huge ERP usage ventures come up short before they even begin.

Organizations despondent with their present framework get to be persuaded their reporting, joining, or effectiveness issues lie in the product they are utilizing. Indeed, even a reimplementation of the same programming is normally less unreasonable than changing to another programming merchant.

B. No reasonable destination.

To be clear with the desires. Once an association settles on the choice to actualize another ERP framework, the initial step is to have a reasonable meaning of accomplishment.

C. Players in the current framework

Some of fundamental players in the current framework are:- 1)Academic program officer – disseminate classrooms to all school/foundation at the beginning of every scholarly year.

IV. DATA ANALYSIS

A. Data Analysis

Introduction

In many SISP studies, variables are not expressed as measurable items. The content of the relations between variables is not presented but just discussed in broad terms. This study adopts a 'micro analysis' to show variables at the item level. Thus, this chapter provides a comprehensive assessment of the content of the relationships between the constructs of SISP structure.

B. Data Preparation

Missing data and outliers are not a problem in this study; a few missing points in two questionnaires are substituted with mean values. Table 0.1 in Appendix E lists the scales against which initial items (variables) are checked for inter-correlation using principal component factor analysis (PCA). 7.2 Response Analysis

The geographical distribution of companies which do not have SISP is shown in Table 6.3. The sample surveyed showed that 46.7% of organisations have their business spread over more than one state.

C.. Industry Type and Size by Turnover

The influence of organisational size on IS planning is widely investigated (Premkumar and King, 1994). Only a few researchers observed a weak relationship between organisational sizes and IS planning. The majority of the findings were positive.

D. SISP Maturity versus Company Size

Previous sections demonstrated that larger companies perform SISP more regularly and that organisation size is a significant antecedent for SISP. This section investigates how SISP success and SISP maturity relate to a company size.

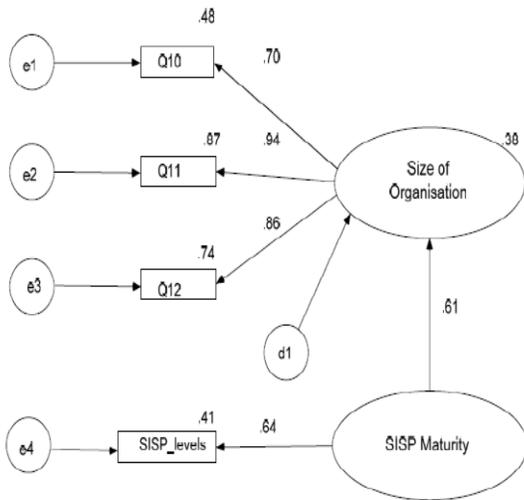

Figure 1. SISP Maturity versus Company Size

E. SISP Maturity and Benefits from SISP Relations

Improved internal communication and improved productivity are two main benefits resulting from the SISP endeavour in Australian organisations (Table 6.33). Communication is inherent to information technology, and deployment of IT/IS is traditionally seen as a way of improving productivity. Teo et al. (1997) found that benefits from SISP in Singapore are improved productivity and improved internal coordination.

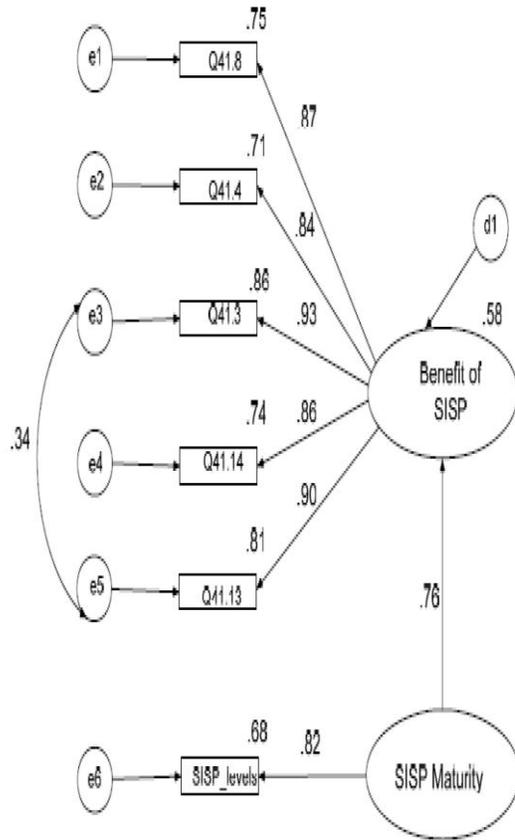

Figure 2. SISP Benefits: Measurement and Structural Model

V. DISCUSSION AND CONCLUSIONS

A. Introduction

This section talks about the significance of this study for the SISP hypothesis, the commitments that this exploration has made to SISP research strategies.

B. Summary of the Research Work

The examinations in this segment chiefly take after the characteristic method for advancement of this proposition.

C. Context and Issues

The principle point of this study was to discover a strategy to viably survey SISP as a mind boggling marvel and after that gauge it in Australian associations.

D. SISP Theoretical Models

To have the capacity to offer the model for the evaluation of SISP, the study researched methods for lessening the multifaceted nature of the SISP process.

VI. FUTURE EXPANSIONS

A dynamic measurement of the model can be accomplished in two distinctive ways when utilizing the AHP.
